to be used in India and many other countries of the world. There is dearth of available and affordable laboratory facilities for BLL estimation. We strongly need rigorous control on lead based paints and colouring agents, laboratories for BLL estimation, estimation of lead content in soil and water in high risk areas, as well as community awareness on lead poisoning. Future research should focus on identification of risk factors and burden of this preventable problem through large multicentric epidemiological studies.

Contributors: SC: collection of data and electronic preparation, UF: Study concept, study design, electronic preparation, final revision, SMA: study design, revision of manuscript and AAM: analysis of data, revision of the manuscript. 
Funding: None; Competing interest: None stated.
